

Technical specifications

ELECTRICAL SPECIFICATIONS

AIR+ connects directly to the auxiliary power socket or cigarette lighter.

Voltage: 12.0 – 14.5 V DC

Current: 2.5 – 3.5 A

Cable length: 106.7 cm

DIMENSIONS AND WEIGHT

Dimensions: 36.8 cm x 19.1 cm x 16.5 cm

Weight: 1.52 kg

- Fully automatic: no operator needed.
- Switches off automatically at the end of the cycle.
- Equipped with a level sensor to check the amount of hygienising solution.
- Automatic low solution level warning.
- The hygienising service can only be carried out when the boat's engine is running and the air conditioning system is on in recirculation mode.
- If the boat's air conditioning system has a filter, this must be removed before hygienising begins.
- Duration of cycle: approx. 15 minutes.
- Once the hygienising cycle has come to an end, we recommend airing out the vehicle for approximately 10 minutes.

The product comes complete with a kit of "Clean Air" air fresheners to clip directly onto the air vents inside your cabin.

**Hygienising solution
for air conditioning systems**

AIR+ THE COMPLETE HYGIENISING SOLUTION FOR AIR CONDITIONING SYSTEMS

Before treatment

Boat air conditioning systems ensure passenger comfort in summer and winter alike.

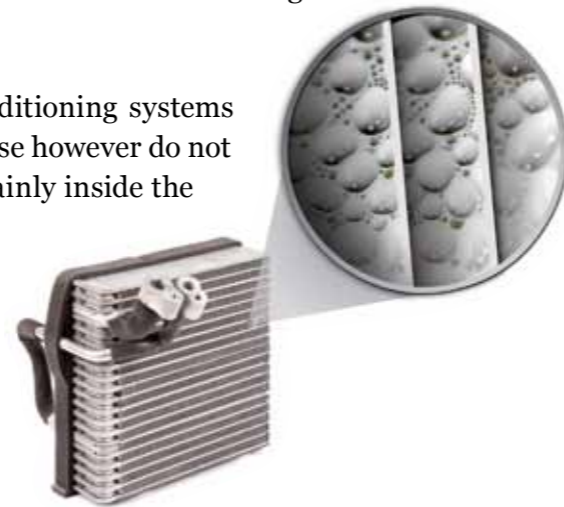

Unfortunately most manufacturers do not take into account the quality of the air coming out of the system.

A large quantity of allergens live and thrive inside your boat's ventilation system and spread throughout the cabin when the fan is switched on.

These allergens, moulds and bacteria are the cause of numerous respiratory problems, including coughs and sore throats, as well as allergies and persistent odours.

To ensure adequate hygiene it is not enough just to replace the air conditioning filter regularly. Though air filters provide effective barriers against dust, pollen and dirt from outside, they cannot guarantee protection against the micro-organisms that proliferate in the air conditioning system evaporator.

Among the most common products used to clean air conditioning systems are liquids which are sprayed directly into the air vents; these however do not solve the problem. Dirt, moulds and bacteria proliferate mainly inside the evaporator, where these sprays cannot penetrate.

Only a product like AIR+ by TEXA can reach deep into the evaporator of the air conditioning system to provide adequate hygiene.

AIR+ is a professional device based on an ultrasonic atomiser that releases an ultra-fine mist inside the cabin.

To ensure complete hygiene on board all you need to do is switch on AIR+ and run the boat's air conditioning system in "recirculation" mode.

The hygienising solution released by AIR+ diffuses throughout the air conditioning system and reaches the evaporator where it eliminates mould, bacteria and fine particles, restoring a healthy, bacteria-free air flow.

And that's not all!

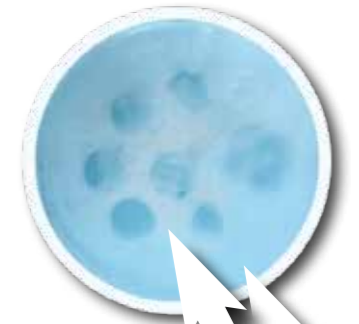

Thanks to its ultrasonic action, AIR+ hygienises the entire cabin, including carpets and upholstery, providing a deep, thorough cleaning in order to travel safely, odour and allergy-free.

The hygienising process using AIR+ by TEXA is extremely cheap and takes only 15 minutes.

For optimum results and to avoid unnecessary respiratory problems and allergies, have your system treated with AIR+ by TEXA every 6 months.

After treatment

Food remnants, dirt and micro-organisms are deposited inside the cabin during everyday use.

Dirty shoes, wet clothes and pets are typical carriers of allergens and bacteria.

These micro-organisms inevitably come into contact with passengers and any children playing, sleeping or eating on board.

Allergens, bacteria and unpleasant odours are all introduced into the cabin via the air conditioning system.

AIR+ releases an atomised disinfectant solution into the cabin and into the air conditioning system.

This completely hygienises the cabin in just 15 minutes. Quick, simple and effective!
