

IDC4E software update

MARINE 10

TEXA

IDC4E...volution MARINE 10

The heart of TEXA diagnostics

IDC4E is the result of a long and in-depth study that put together mechanics on one side, and TEXA developers on the other, in order to create a new software easier to use, with the most requested workshop operations always easily available and with the different information and functions more interconnected in order to offer mechanics a support that is customised and based on the analysis of their actual needs.

The new graphical interface is featured, for example, by bigger and more intuitive icons, by technical information-diagnosis contextual links and vice versa, by a new customer management system for a quick profiling and many other functions.

Below are the main innovations:

1. The GLOBAL SCAN function has been put in the foreground in the Self-diagnosis menu to make it easier to use.

2. The vehicle selection procedure was redesigned to further increase the intuitiveness by reducing the steps in order to reach the selection in only a few clicks. By using the new START button alongside the system selected, you immediately reach the ERRORS screen.

3. Navigation within the software screens is easier thanks to the use of tabs (PARAMETERS, STATUSES, ERRORS, ECU INFO, ACTIVATIONS, ADJUSTMENTS).

4. Favourite buttons with Print, Recording, Deletion and function buttons: FREEZE FRAME, Self-diagnosis Help, component wiring diagram and solved problem service.

5. Favourite parameters always available. This function allows you to customise and store a list of parameters creating logical groups that are useful to investigate a possible vehicle malfunction.

6. The reorganisation of the IDC4E software also includes the reorganisation of the technical documentation related to the vehicle directly in the Self-diagnosis.

7. The section dedicated to Customer Management was redesigned and allows you to manage your customers through a detailed profiling of the vehicle and of the repairs that were carried out on it.

IDC4E MARINE SOFTWARE UPDATE VERSION 10.0.0

IDC4E MARINE 10.0.0 is a software developed at three-hundred-and-sixty-degrees which includes technical data and additional functions, all in one diagnostic solution, and not only.

In fact, starting from version 10, the IDC4 software evolves and becomes IDC4E, more powerful and efficient, featured by an interface, is easier to use, developed from the feedback of ideas between mechanics and TEXA technicians.

DIAGNOSIS DEVELOPMENTS

MARINE 10 covers a range of 35 makes and almost 700 models. We wish to point out the update of the database for the make **SUZUKI MARINE**, with the introduction of some new inboard engines and the update of the database for the make **KAWASAKI MARINE**, with the introduction of some new personal watercrafts and the extension of the diagnostic coverage up to 2015.

It is important to highlight that, other than the diagnosis, TEXA also offers additional technical information such as technical sheets, bulletins and wiring diagrams that are updated and extended at each SW update.

Within the IDC4E software, you can check out all these new features in the DOCUMENTATION menu. There, you will find details of all the makes, models, systems and the related diagnostic functions introduced in the version.

We remind you that the **BASIC** activation offers the diagnostic coverage of all the makes that belong to the "PWC Personal Watercrafts" and "outboard engines" categories. It also guarantees the coverage of the makes Cummins Mercruiser Diesel, Mercruiser, Mercury Diesel, Mercury Racing and Volvo Penta of the "inboard engines" category.

To gain the maximum diagnostic coverage, including the complete "inboard engines" category and the "industrial engines/generators" category, you must carry out the **PLUS** integration.

Note: for the owners of AXONE 4, the maximum diagnostic coverage is already available thanks to the included PREMIUM activation.

DISCOVER YOUR TEXA ID AND ALL THE myTEXA PORTAL SERVICES NOW

Another new feature available starting from IDC4E MARINE 10 is the possibility, during the software installation/update phase, to view your TEXA ID, an alphanumeric code that allows you to register to the myTEXA portal and benefit from a series of useful dedicated services. You will be able to manage your information, view the details of the diagnostic tools you own, the status of your subscriptions, the services that are active.

myTEXA also allows you to access the reserved area DOWNLOAD MANAGER, the new application specifically developed to simplify, speed up and furtherly protect the downloading procedures for the diagnostic software programs, to subscribe to TEXA's newsletter and receive directly in your mailbox all the last news regarding the company, its products and related updates and upgrades, other than the TEXAEDU course calendar and much more.

IMPORTANT NOTICE: NEW MICROSOFT WINDOWS 10 OPERATING SYSTEM

Dear Customers,

Microsoft announced that at the end of July 2015 the Windows 10 operating system will be launched officially and it can be downloaded and installed free of charge within one year from its release date by all the users that own PCs with version Windows 7 or Windows 8.1. TEXA wishes to inform you that it has been working for some time to make the switch over to the new operating system as easy as possible and without any consequence for the proper operation of all its software programs. However, until the tests are completed, TEXA cannot guarantee that its programs are compatible and operative with Windows 10. We therefore invite you not to update the operating system on your personal computers with TEXA software programs until we give you further notice.
